

Mgr. Lucie Ambrožová

4th year of doctoral studies, entomology

My study is primarily focused on insect ecology and conservation. In my dissertation, I study the effects of grazing of large herbivores on dung beetles. I participate in teaching on field excursion for the faculty and science popularization for Biology Centre, CAS.

During the ten years at the faculty, I greatly appreciate the open and friendly environment. That is also why I want to participate in organization and development of the faculty in the future.

I am not running for AS with any program. If elected, I would like, among other things, to support activities that will lead to the simplification and digitalization of the necessary study bureaucracy, and improved communication between management and students.

Bc. Zuzana Bumbová

2nd year of Master's study programme Informatics for Secondary Education.

I completed my Bachelor's degree at FS USB (Applied informatics – Forensic information technology).

I would like to represent interests of both technological and pedagogical sections of our students here at Faculty of Science; and help communicate any issues, especially coming from younger students that are currently not represented in the senate.

Petr Lunga

2. year bachelor

Biology and Maths for teaching

I run for membership in Academic Senate, because I've always enjoyed being part of school management and having a say in making of the rules. I've been in school environment literally since I was born, therefore I have really clear image about things that are the most important for school to run properly and provide excellent conditions for students and employees. The main point of my program is to raise quality of online lectures not only from educational but also from organisational point of view. Second most important thing for me personally is communication between students, teachers and school management. I think that

unifying channels of communication is one of the easiest ways to achieve this goal. And now for something completely different, as Monthy Python says. One of my other goals is to revive culture and sport events, that are for sure important part of academic life. I sincerely hope that not far now this aspect of our faculty will regain its former popularity.

Mgr. Ivana Šimová

2nd year of full-time doctoral study in the Biophysics study program

Member of disciplinary committee of Faculty of Science USB

As a graduate and current student of FSci of USB, I believe that I obtained a sort of insight into the organisation and form of studying here at FSci. I used some of my experience when participating at the discussion related to the new accreditation of my former bachelor study program Biophysics. Needed to say that exactly this opportunity raised my interest about the possibility of discussing or eventually partially influencing the activity and smooth functioning of our faculty as a whole.

Despite the fact that I do not currently possess any particular ideas or intentions, I believe that my former experience and personal opinions can contribute to positive decisions about the future activities of FSci of USB.

Ing. Ondřej Trtílek

Bachelor's degree program of Applied Informatics – Embedded Systems

2nd grade

I have finished the master studies in economics and political science and subsequently achieved the master's degree at the Faculty of Economics at University of South Bohemia. Frankly said, I have been working in this field since right after the end of my studies. Since my childhood I have been interested in IT and computers in general. As my current job allows me to focus also on other studies, I did not hesitate and applied for the IT study programme here at Faculty of Science USB.

My diploma theses supervisor came up with an idea of my candidature for a member of the students' chamber of the Academic senate of FS USB. As far as I am concerned, I would like to be involved in a daily running of the faculty in a sense of a constructive criticism at least. The Academic Senate has rather a checking status, hence promoting my own visions or programme is a bit out of place.

Mgr. Michaela Uhrová

Field of study Zoology, first year of doctoral studies

After finishing the bachelor and master programmes right at the Faculty of Science USB, I decided to get involved into its affairs and organization and so to candidate to the Academic Senate. From the view of a student, I would endeavour to have easily accessible and clearly formulated rules and obligations for students, so they do not have to hesitate what to do, where to deliver which document, and may concentrate on the most important point, studying.
